

TANA RIVER COUNTY

Ron Geatz/TNC

REPUBLIC OF KENYA

Funded by
the European Union

The Go Blue Project Result Area 2 is jointly implemented by United Nations Human Settlements Programme (UN-Habitat) and United Nations Environment Programme (UNEP). The Project aims at enhancing land-sea planning and management by addressing key socio-economic and environmental challenges while stimulating benefits from the blue economy. By promoting the economic growth of coastal urban residents and the preservation of coastal and marine resources, the project seeks to assist in the nation's transition to a sustainable blue economy. Undoubtedly, a vital element in the sustainability of blue economic development is the maintenance of healthy marine and coastal ecosystems. However, these important ecosystems are decreasing at an alarming rate because of growing, and increasingly frequent stresses.

Objectives

- Implement an integrated, ecosystem-based approach to land-sea planning and management by formulating land-sea planning guidelines.
- Ensure participation and inclusivity of women and young people and creation of jobs.
- Enhance institutional and individual capacities for a sustainable blue economy in coastal urban areas.

Planned Activities

■ Enhancing Technical Capacity of staff

The project will develop the technical capacity of county staff in data and information management. Key personnel will receive training to effectively utilize the data centre, enabling them to map natural resources, plan human settlements, and enforce development control measures. The project will enhance county staff's ability to manage data and information. Key personnel will be trained to use the data centre effectively, enabling them to map resources, plan settlements, and enforce development controls.

Participatory mapping workshops in Hola municipality

■ **Hola Municipality Local Physical & Land-use Development Plan**

The project is jointly with the County government developing the Hola Municipality Local Physical & Land-use Development Plan (LP&LDP) that will further contribute to the county's urbanization and village cluster programme and pilot the land-sea planning guidelines at a municipal scale.

■ Coastal and Marine Ecosystems Assessments

Assessments and valuation of coastal and marine ecosystems, vulnerability to climate change, and socio-economic conditions will be conducted to guide ecosystem-based disaster risk reduction planning and resilient economic development. The project will assess and value coastal and marine ecosystems, climate change vulnerability, and socio-economic factors. This information will guide plans for reducing disaster risks and developing a resilient economy. A solid waste audit, in collaboration with the county government and involving residents, has been carried out with the aim of classifying waste and documenting the waste management processes of residents and county authorities.

■ County Data Station.

Strengthening of the County GIS (Geographic Information Systems) lab and creation of a data station in the Lands Department County Offices, which will host data on spatial planning, environment, blue economy, WASH (Water, Sanitation & Hygiene), etc. and will be useful across all county departments, enabling informed decision making and efficient resource allocation.
